FleXinspect Inspection Update:

Universal Vision Mold Number Reader (U-VMNR)

Available for all FleXinspect BC, FleXinspect B & Veritas IB SCOUT®

Challenge: To accurately and reliably identify the heel dot codes on containers of different shapes, sizes and colors.

Solution: The U-VMNR is a newly designed module that removes the complexity of setup during job changes by eliminating all change parts required to inspect different diameter containers. The design of the new U-VMNR enables the device to be less affected by the shape of the container heel, bottom pushup or glass color.

Features:

- *No job change parts*
- *Containers diameters up to 100 mm*
- *Simple ergonomic adjustment*

Benefits:

- *Reduced job setup time*
- *Improved mold correlation*
- *Increased accuracy of mold reading*

For more information on the new U-VMNR please contact your local Bucher Emhart Glass sales representative.
