

SmartInspect AI

The next-generation AI
system that transforms
container inspection

Simplifying container inspection

The future of container inspection is here. SmartInspect AI transforms inspection setup by maximizing defect detection while significantly reducing complexity. Unlike conventional systems that rely on predefined Regions of Interest (ROI), SmartInspect AI eliminates the need for extensive ROI configuration.

Using onboard training focusing on defects, there is no need to supply containers or images for factory training of data sets. Instead, training is performed directly on the machine using live production images, enabling faster deployment, easier setup, and continuous adaptation to real-world manufacturing conditions.

Your benefits with SmartInspect AI

Reduce set up and job change times - thanks to simplified process - e.g. to set up a typical base inspection 47 steps are required, while SmartInspect AI only requires 2

Accurate and uniform defect information - job portability allows for same set up in plant wide networks

Reduced technical knowledge requirements - no need for specialized zones or extra parameters

Lower false reject rates

Clear defect classification - users can precisely control defect tolerances

Maximizes inspection coverage - can also be used in combination with conventional set-ups

Upgradeability - can be installed in only 10 hours

SmartInspect AI is available for Sidewall, Base and Finish inspection used in the FlexInspect Generation III B/C or T/M machines.

Simplified UI

Touch-to-set to easy fine tune
